# 3K+

**Satisfied users** in **11 countries** in Europe

# 20

**Dish categories** analysed in real time for repetitions.

What is Menutech?

**Menutech (menutech.com) is the SaaS to automise the allergen declaration, translation and design of food menus. This triple combination is a unique offering on the market.**

For who is Menutech?

**The Menutech app is ideal for restaurateurs who change their food & beverage menus on a daily or weekly basis. All F&B information is stored on the user's private database, meaning they never have to declare the allergens or translate a same dish twice. In just 1 click, the menus can be generated in different styles and for multiple locations. The menus are generated in HTML, exported in a PDF format and ready for print.**

What is the technology?

**Menutech is powered by syntax analysis tools that allow allergens to be automatically detected on food and beverage menus. This detection algorithm – as well as the live assistant for allergens, additives and translations – is self-refining using Machine Learning technologies.**

They automise their Food & Beverage information processes with Menutech:
